Complete cultural instructions with each order.

All orders delivered prepaid.

Cash with order. No orders accepted for less than \$1.00.

No gladiolus seed for sale after April first.

No seedling bulbs for sale after May first.

While we offer no warranty, expressed or implied, on any of our seeds or bulbs (as is the usual custom of the seed and nursery trade) we are nevertheless anxious that every purchaser of our seed or bulbs shall receive entire satisfaction. It will be to the direct advantage of every purchaser of our goods to write and tell us what results were obtained. We are not doing this for any advertising purposes but simply to protect our customers.

ARTHUR C. KOERNER

Gladiolus Seed and Bulb Grower

FIVE OAKS FARM, NEWPORT, MINNESOTA

SOUTH AFRICAN SUMMER AND WINTER FLOWERING GLADIOLUS SPECIES SEED

AFRICA—the very mention of the name conjures up visions of stupendous things, mysterious things, wonderful things. Roving herds of elephants, lions, giraffes, zebras, and in the darkness of unending forests huge reptiles. BIG THINGS—deserts, rivers, waterfalls, plains, mountains, solitude. Diamonds, gold. Vegetation of every description, exotic things, beautiful things. No wonder God created the gladiolus and placed it there amid such surroundings. Down through the ages to this very day it is growing wild there, new species are still being discovered. Last year we were able to offer a new one and we hope soon to be able to offer another new discovery, one with 12 to 16 blossoms open at a time.

The gladiolus family offers summer, winter and early spring flowering species. A number of the summer flowering species have been developed and we have the wonderful gladiolus of today with the many possibilities of the

summer flowering species by no means fully developed or exhausted. The same crosses attempted and developed today would produce far more remarkable results than were produced by the early hybridizers who had to work with hybrids in no way comparable with our own.

The winter and early spring flowering species have received very little if any attention at all. The only true winter flowering gladiolus that we know anything about are the "Baby Glads" and these are to be had today in just about the same sizes and colors as when first originated about 108 years ago. At that time the summer flowering gladiolus was just as small and as insignificant as the "Baby Glads" or Colvillei group, and certainly what has been accomplished with the summer flowering gladiolus can also be accomplished with the winter flowering gladiolus. This development which is already producing some remarkable results here and abroad is the most profitable that can be undertaken with the gladiolus at the present time.

Our vast greenhouse industry has changed the seasonal flowering habit of many plants, we can have almost any plant in the dead of winter and grown to a greater perfection than would be possible in the natural flowering season. The popularity of the gladiolus is such, its usefulness to the commercial florist is such that there is a great need and demand for the gladiolus in the winter time. The solution of the problem is very simple, the genus supplies summer, winter and early spring flowering species and instead of wasting time trying to change the seasonal flowering habit of the summer flowering gladiolus, which so far certainly has not been accomplished with any degree of assured success and profit, we might more profitably work along scientific principals of plant propagation observing some of the underlying laws of nature necessary for success, and devote our attention to the development of the species that are natural true winter and early spring flowering, besides many of these possess the added attraction of fragrance and other characteristics entirely unknown in the summer flowering gladiolus.

A wise South African Government has placed the native wild gladiolus under "The Protective Act" and bulbs may not be placed in commerce there. The seed comes true, and it is only in this form that we may secure the species at all. Practically all of the species offered here have been verified at the herbarium of the National Botanic Gardens at Kirstenbosch.

It has never been an easy matter to obtain this seed and we have spent a great deal of time, effort and money to establish contacts in South Africa with reliable persons who were interested enough to make it possible to offer this seed for general distribution. We have felt right along, considering the wide spread hybridization the gladiolus is receiving that the gladiolus species would be used more freely if more easily available and so far we haven't been able to supply the demand.

The descriptions given, are by the persons supplying this species seed. We assume no responsibility whatsoever with this seed. We have taken every precaution, we have done all that possibly could be done, we have bent every effort to obtain varieties that are true to name and exactly as represented, we do not offer this seed under any other conditions or with any other understanding expressed or implied.

Stock is limited. Orders are filled in order of receipt. Money will be promptly returned when we cannot fill an order.

G. alatus, or Kalkoenje, Brick red with green or yellow on lower segments, large flowers, stems 6 to 16 inches, A Cape species, grows in wet winter and flowers in late spring (September) Sweetly scented. 25 Seeds \$1.00

G. angustus, "Painted Lady" Very light coloring with long perianth tube, Very much branched, flowers in early summer (October). 25 Seeds \$1.00

G. angustus (var) Taller and stronger than the type, very much branched, 25 Seeds \$1.00

G. blandus, "The Fairest Gladiolus" Pink, 1½ feet high, 15 to 20 blooms. Often branched, flowers early summer (October). 25 Seeds \$1.00

G. brevifolius, Small flowers, very dainty, flowers sometimes blue and sometimes pink, flowers without any leaves at the end of the hot dry summer (March-April) Produces leaves and new corms later. 25 Seeds \$1.00

G. callistus, Pale pink or white with deeper throat markings 3½ feet high, flowers well spaced on stem, lower petal enlarged like an inverted primulinus. A very good one that should produce something out of the ordinary in shape

or form. It is excellent for cutting, just as it is. Flowers early summer (October-November).

G. carmineus. Very intense carmine color, large flowers on short stems, the long leaves come later, grows quite close to the sea on sandy soil but adapts itself to garden conditions. Flowers in autumn (April). 25 Seeds \$1.00

G. cuspidatus, Yellow with carmine throat markings, 1 foot high, segments narrow and very waved or ruffled, a mountain species, flowers in summer (November). 25 Seeds \$1.00

G. gracilis, Small Blue Afrikander. This is a small, very dainty blue flower marked with yellow on the lower lip, 1 to 2 feet high. A very light, airy flower, one of the most beautiful. The earliest to bloom in the spring on the dry Cape hillsides (August). This will be very popular just as it is for greenhouse culture once it becomes known. 25 Seeds \$1.00

G. crassifolius, Deep pink, clump like masses of foliage with many spikes, flowers autumn. 25 Seeds \$1.00

G. debilis, White, beautifully marked with deep carmine, 1½ to 2 feet high, thin wiry stems, flowers late spring. 25 Seeds \$1.00

G. grándis, The large Afrikander, reddish brown or bronze mottled with yellow, petals pointed and waved, very sweetly scented in the evening, a great deal like *G. tristis* only larger, flowers mid summer. 25 Seeds \$1.00

G. hirsutus, Large deep pink marked with white stripes, 3 feet high, flowers early spring (August). Very fragrant. 25 Seeds \$1.00

G. Leichtlini, Graceful flowers of orange and red, stems 4 feet high. A native of Transvaal where it gets a cold dry winter and plenty of rain in the very hot summer, but is very adaptable. Flowers in late summer (January) but at the Cape it flowers in spring. 25 Seeds \$1.00

G. maculatus, Yellow-brown with brown spots, the most sweetly scented of all species. It is like a dainty edition of *G. odoratus*, flowers winter. 25 Seeds \$1.00

G. odoratus. The increasing interest and use of the species for hybridization purposes here and abroad is stimulating exploration and search for new species in South Africa. Last year we had the honor and good fortune to be able to introduce to this side of the world a new gladiolus species *G. odoratus*. Another very important new gladiolus species has just recently been discovered, we will offer seed of this just as soon as it is available. *G. odoratus* is an important discovery, it is a splendid pollen and seed parent, its flowering period is in the late fall and winter, April-June. It is so named because of its wonderful fragrance, unlike other fragrant species which give off their fragrance by night only, this one is fragrant by day and night. The color is a rich velvety dark maroon marked with gold and brown, the spike is 2 to 3 feet high with 6 to 16 large blooms. The discoverer from whom we are getting the seed has sent us a good supply and we are glad to be able to reduce the price of this species this year. 50 Seeds \$5.00

25 Seeds \$3.00

G. orchidiflorus, Its name describes it exactly. It is allied to *G. alatus* and resembles it in shape of its flower, but the color is just that of an orchid, creamy background shaded into soft brown and purple. The long upper segment is curved completely over. It is very sweetly scented, a lovely thing just as it is for greenhouse culture. Flowers in spring (August-September). Rare and not much seed available. 25 Seeds \$3.00

G. psittacinus, Deep red, lightly flecked with red brown, 2 feet high, flowers in spring (August-September). 25 Seeds \$1.00

G. primulinus, Small lovely pure primrose yellow, 1½ feet high. 25 Seeds \$5.00

25 Seeds \$1.00

G. recurvus, "The Blue Afrikander," Large blue flowers. Flowers sometimes shaded yellow. Flowers very early in the spring (August). Very sweetly scented. 25 Seeds \$1.00

G. tristis, "The Avondblom" Pale yellow mottled with brown, very thin stem and leaves, 4 to 6 feet high, 10 to 20 flowers, very sweetly scented in the evening. It likes moisture. Flowers midsummer or later (January). 25 Seeds \$1.00

G. villosus, Pink, 1 to 2 feet high, very graceful and pretty, flowers spring. 25 Seeds \$1.00

SOUTH AFRICAN SPECIES BULBS

G. dracocephalus, Greenish yellow with purple lines, a strong grower, 5 feet high. Attracts a great deal of attention because of its peculiarly shaped and hooded blooms. It imparts its hooded characteristic to its seedlings.

Each \$.25

G. primulipus. Another member of the *G. dracocephali* family. Pure prim-rose yellow. A splendid grower. Those who like small glads should grow this

just as it is, it is as dainty as can be, the stems are thin and graceful and with a few Baron J. Hulot it makes a wonderful table decoration. Each \$.20

G. quartinianus, Red and yellow throat, 5½ feet high, the leaves are almost as tall, very late flowering. We like to plant it in pots here in Minnesota and then take it indoors when frost puts an end to out of door flowers.

Each \$.25

G. psittacinus, Deep Red Flecked with Red Brown. Each \$5.00

G. Saundersii, Red, White Throat, Lily like Shape Each 10.00

PEDIGREED HAND POLLINATED GLADIOLUS SEED OF 1930 CROSSES

The gladiolus is one of the most wonderful of all flowers. It is the florists flower par excellence, it is the back yard gardeners flower and it is he who usually exhibits the most perfectly grown spikes in our gladiolus shows. It is one of the easiest of all flowers to hybridize and the scientific plant breeder, the amateur, the back yard gardener all may do it with success.

If left to bloom out in the garden it will usually set seed by itself and gladiolus seed is as easily grown as any other seed and will produce gladiolus of new colors, shapes and forms. Seed thus produced or where its own pollen is applied upon itself, is known as self pollinated seed and with it there can be no indication of what the results will be. Where one variety is crossed upon another, seed thus produced is known as hand pollinated seed and with this there is a definite sense of direction and almost any desired results may be attained, growing either self or hand pollinated gladiolus seed into bulbs the first year and these into bloom the second, is the highest possible pleasure to be had with the gladiolus and the reason the gladiolus has become so popular and will always remain popular is that the average person can accomplish so much with it and that remarkable results do occur even from crosses of almost unimaginable combinations of varieties and made under conditions that wouldn't be attempted or tolerated in any other line of animal or plant breeding. Where the gladiolus enthusiast is doing this himself with no responsibility insofar as his relations with others are concerned, if he gets results, the means to an end will justify anything he may do.

Gladiolus seed production is our business. We are not interested in the sale and distribution of named varieties. We do not grow bulbs for the wholesale or retail trade; what bulbs we do offer are surplus stock.

Our collection of standard, rare and new named varieties from originators from all over the world is one of the largest and best balanced to be found anywhere. This enables us to make any cross we wish without the weakening effects of inbreeding which always takes place where varieties of one originator or location, environment, strain or type are used exclusively.

The production of pedigreed, guaranteed, true, hand pollinated gladiolus seed is exacting work and requires the most painstaking attention to seemingly small details. We grow all the varieties we wish to cross, in insect, moisture, and wind proof cloth covered enclosures. Out in the open field, even with the greatest of care, there is always the possibility of weather conditions or of some foreign influence interfering with or preventing a true cross. Other matters of prime importance must be considered: what size, age and condition of bulbs to use, what cultural methods must be employed to get the maximum plant and flower development, timing the varieties and the cross, the gathering and curing of the seed. All these things are of the utmost importance if plump, full of life, true to cross seed is to be produced. The plants grown in these enclosures are always more robust and vigorous, the flowers always more perfect in color, size and texture than the same varieties grown out in the open field, varieties that will self pollinate heavily out in the open field are barren when grown in these enclosures. Only one person makes the crosses in these enclosures, no visitors are allowed in these enclosures during the crossing season, thus we are certain that the seed produced under these conditions is as good and as true as can possibly be produced.

We stand back of this seed. It would be presumptuous to claim or even

to intimate that just because this seed is hand pollinated and really true to the cross, that it will produce remarkable results or world wonders; we make no such extravagant statements and that is why we say we stand back of our hand pollinated gladiolus seed. We protect our patrons on our hand pollinated seed and it will be to the direct advantage of every purchaser of this seed to let us know what results are obtained. The names and descriptions of the parent varieties indicate the possibilities of each cross, the aforementioned facts of seed production, the cost of the varieties crossed and the possible results of such crosses are the factors that determine the cost of the seed. We do not have, nor do we offer any hand pollinated gladiolus seed in mixtures.

We wish to call especial attention to our lacinated crosses. This type of gladiolus is receiving a great deal of attention at the present time, and rightfully so. It is a real florist type of flower: the stems are thin, wiry and pliable, the spike is graceful, the frillies, finely edged flowers are ideal for make-up work with other flowers and for fine decorative effects, it is a bud vase type of flower and fills a place so far unoccupied by the gladiolus. The range of color is as yet extremely limited, size is lacking, an undesirable hooded effect should be eliminated. Its development offers opportunity without the keen competition in the other types.

It is understood, that all originator's credit, rights and claims on any outstanding specimens produced from our gladiolus seed and unbloomed seedling bulbs, pass on automatically to the purchaser of this seed and bulbs. We reserve no claim whatsoever on any outstanding specimens. The purchaser secures all these rights, the right to name, disposition of same, by the purchase of the seed and bulbs.

Stock is limited. Orders are filled in order of receipt. Money will be promptly returned when we cannot fill an order. Please order by number and name.

PEDIGREED HAND POLLINATED GLADIOLUS SEED OF 1930 CROSSES IN LESS THAN 25 SEED QUANTITIES

Every season we receive so many inquiries regarding crosses other than we list. It stands to reason that we do not obtain 25 or more seeds from each cross we make. Simply for the purpose of eliminating a lot of time-consuming correspondence we are listing under this heading all of the seed of crosses that we obtained this past season. We will be glad to quote quantities and prices upon inquiry. We positively have no other hand pollinated gladiolus seed than that listed here.

PEDIGREED UNBLOOMED HAND POLLINATED SEEDLING BULBS OF 1929 CROSSES

Back in the days when I didn't know whether the word "Gladiolus" meant a town or a disease, my sister gave me a few bulbs, Pendleton and Richard Diener were in the lot. I planted them and when they came into bloom, how I did send for catalogs and how I did buy named varieties. Somehow or other, the second year's bloom never gave me the thrill I experienced the first time I saw the variety. And I bought and bought and bought, I discarded, gave away and then sold bulbs, but never could quite get ahold of the satisfying something I felt the flower possessed. Then I discovered that back of the introduction of every new variety there was a period of from 3 to 5 or more years that was packed as full of drama and adventure as interesting and as thrilling as any sport, with all the elements of chance and skill that are part of fishing, hunting, playing baseball, football, golf, or what have you.

It is this period of gladiolus seed and seedling growing which the average man and woman may do as easily and as successfully as the scientific plant breeder, that has made the gladiolus a world wide favorite, so many of the species of the family are still untouched and undeveloped that no one need fear the gladiolus is just a passing fancy or craze, its possibilities are still limitless. Many and many a Gladiolite is in the same boat regarding the second year's bloom; Gladiolus seed and seedling bulbs is the answer. For

many, time, space and stock are the obstacles preventing this interesting phase of gladiolus culture, and that is where we fit into the picture. We know and everyone knows that every gladiolus seed and seedling bulb will not be a world wonder, we protect our patrons on our hand pollinated seed and hand pollinated bulbs and it will be to the direct advantage of every purchaser of our seed and bulbs to let us know what results are obtained.

The pedigreed unbloomed hand pollinated seedling bulbs we are offering this year are the largest and plumpest, the best we have ever been able to offer. Practically all of our hand pollinated gladiolus seed of 1929 crosses was grown under impervious paper mulching, this method has proven itself again, more than ever, to be the best and most successful of any we have ever tried. Just as with the cloth enclosures in the production of seed, it is costly, but the cost is offset by the peppy, full of life bulbs we get and the certainty of bloom the second year.

We are devoting a great deal of space in this catalog describing our various methods of seed and seedling bulb production, but where we are offering this seed and seedling bulbs, the purchaser has a right to know just how and under what conditions this seed and seedling bulbs are produced, and we feel and know we have the right to claim, that our seed and seedling bulbs are the best that can possibly be produced.

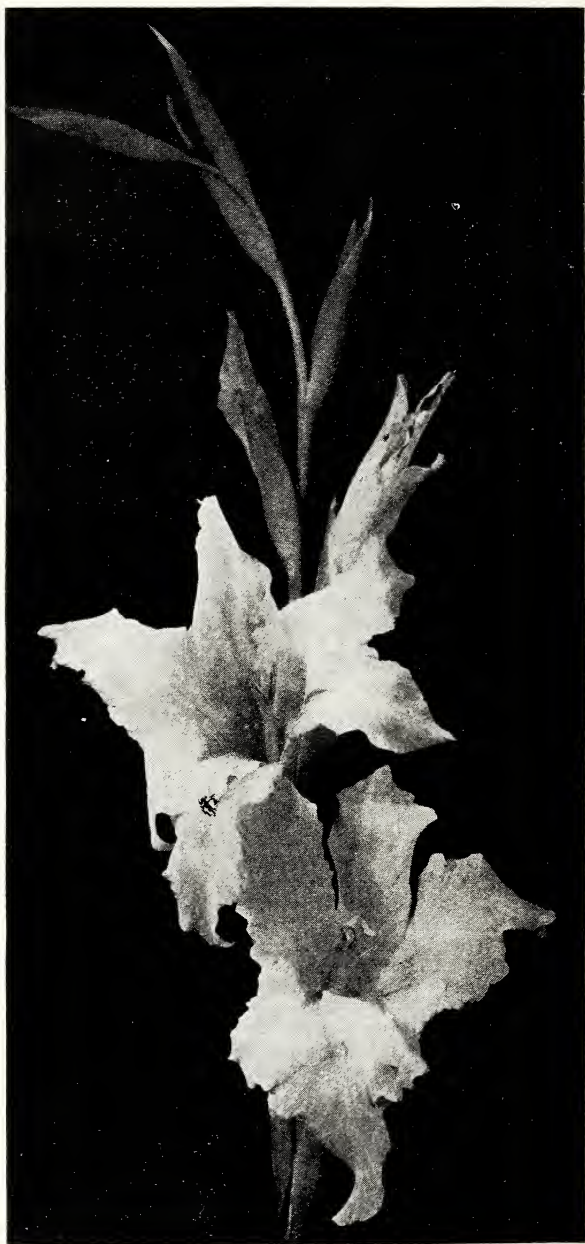

It is understood, that all originator's credit, rights and claims on any outstanding specimens produced from our gladiolus seed and unbloomed seedling bulbs, pass on automatically to the purchaser of this seed and bulbs. We reserve no claim whatsoever on any outstanding specimens. The purchaser secures all these rights, the right to name, disposition of same, by the purchase of the seed and bulbs.

Stock is limited. Orders are filled in order of receipt. Money will be promptly returned when we cannot fill an order. Please order by number and name.

OUR NEW DECKLE EDGE TYPE

The edges of the petals are not fluted or ruffled as in the ruffled type, nor fringed or lacinated and hooded as in the lacinated type. Ours, is an open faced flower with the edges of the petals rough edged like the ragged edge of hand made paper—hence the name.

We wish to call especial attention to the stem, which is characteristic of the type, thin, wiry and pliable. Flowers and buds are well placed and not many on a stem, the lower segment is usually longer than the rest. For florists' fine make up work and especially with other flowers it is in a class by itself, graceful and unobtrusive. We are **NOT** offering bulbs of this type as yet, but are offering seed to produce the type.

The flower shown here is from a cross of an

The Orchid-Lacinated Seedling, on

1930 SELF POLLINATED GLADIOLUS SEED OF NAMED VARIETIES

We are not offering any self pollinated gladiolus seed of named varieties this year. The season was as hot and dry with us as anywhere. As these named varieties are all field grown we had to top them as they came into bloom to save the bulbs. Belated rains saved the bulbs and what seed we did get from late blooms is all placed in the Gladiolus Hybrid Mixture.

1930 SELF POLLINATED GLADIOLUS HYBRID SEED IN MIXTURE

All the seed of named varieties that was harvested this last year is placed into this mixture. Hand pollinated seed where the labels were lost or mixed up, that of promising seedlings and of many seedlings of other growers that we are growing for trial, everything except Prims is placed in this mixture. We haven't our usual supply and first come first served.

1 Packet of 1000 Seeds	\$.75
3 Packets of 1000 Seeds Each	2.00
6 Packets of 1000 Seeds Each	3.00

1930 SELF POLLINATED PRIMULINUS HYBRID SEED IN MIXTURE

We have none to offer this year.

UNBLOOMED 1930 SELF POLLINATED SEEDLING BULBS OF NAMED VARIETIES

Last season we were able to offer self pollinated seed of 157 named varieties. This year we can offer only 117 varieties in the form of bulbs grown from this seed. As we have no self pollinated seed of named varieties this year, we will of course not be able to offer self pollinated bulbs next year, and if we may suggest it might be well to anticipate your wants from this list as it will be a few years before we can offer self pollinated bulbs of named varieties again. These were grown under impervious paper mulching and are fine bulbs.

Stock is limited. Orders are filled in order of receipt. Money will be promptly returned when we cannot fill an order.

Please order by Number and Name and Size.

Prices on these bulbs, unless otherwise listed, are as follows:

No. 2s \$.50 ea. No. 3s \$.25 ea. No. 4s \$.15 ea. No. 5s \$.10 ea. No. 6s \$.05 ea.

UNBLOOMED 1930 SELF POLLINATED GLADIOLUS HYBRID SEEDLING BULBS IN MIXTURE

If you have never grown the gladiolus from seed, then start with these unbloomed seedling bulbs. This mixture will give a pretty fair insight into one of the most fascinating and interesting phases of all flower growing. No two will be alike. These should be grown in quantity, the larger sized bulbs will give full sized flowers, the smaller sized bulbs will also bloom but the flowers will very likely not be full sized, but the color, markings and form will be apparent and you will know what you have.

No. 2 Bulbs	\$1.00 per dozen	12 dozen	\$10.00
No. 3 Bulbs75 per dozen	12 dozen	7.50
No. 4 Bulbs50 per dozen	12 dozen	5.00
No. 5 Bulbs25 per dozen	12 dozen	2.50
No. 6 Bulbs15 per dozen	12 dozen	1.50

For a long blooming period, we would suggest a mixture of the above different size bulbs at \$5.00 per 12 dozen.

UNBLOOMED 1930 SELF POLLINATED PRIMULINUS HYBRID SEEDLING BULBS IN MIXTURE

What was said about gladiolus hybrid seedling bulbs, is equally true of Primulinus hybrid seedling bulbs. All of the sizes listed here will bloom this coming season.

No. 4 Bulbs	\$.75 per dozen	12 dozen	\$7.50
No. 5 Bulbs50 per dozen	12 dozen	5.00
No. 6 Bulbs25 per dozen	12 dozen	2.50

For a long blooming period, we would suggest a mixture of the above different size bulbs at \$3.50 per 12 dozen.

GLADIOLUS BULBS

All bulbs are No. 1 size.

One dozen at the ten rate.

Cash with order. No orders accepted for less than \$1.00.

All orders delivered prepaid.

The American Gladiolus Society cultural instructions included with each order.

All bulbs are sound, disease free, up to size and true to name.

Quite a number of varieties listed here have no price mark. These we do not wish to sell as we want to use them for hybridization purposes.

Many of the crosses we are offering this year are the results of requests and orders we have received for such crosses. If you have any crosses in mind, that you think should give the results you desire, send us the names of the varieties you wish crossed and we will make the crosses both ways, if possible. There is positively no obligation or expense for this. If we get seed from such a cross, we will communicate with you, and you can then buy the seed or leave it alone, just as you wish. If we do not sell the seed, we will grow it. You may also order self pollinated seed of any named variety under these same conditions. All requests or orders for this, must be in and on file with us by April first to enable us to plant our stock accordingly.

Adair (K) Soft Canary Yellow, Laciniated	Each \$3.00

MIXTURES

Large flowering types of gladiolus, in all colors, no better value to be had anywhere, in lots of 100 bulbs only **\$2.00** prepaid
 G. Primulinus, in all colors. The flowers are somewhat smaller and hooded, but they have a charm, softness of color and a wiry grace that is lacking in the larger types. In lots of 100 bulbs only **\$1.50** prepaid

MISCELLANEOUS BULBS

In offering these summer flowering bulbs we have in mind bulbs that are handled exactly like the gladiolus, that is, planted in the spring and taken up in the fall and stored like the gladiolus over winter. All except the Montbretias should be planted only after the ground is nicely warmed up. Montbretias may be planted as soon as heavy frosts are over.

ZEPHYRANTHUS

Zephyr flower or Fairy Lily. Beautiful dwarf bulbous plants with large star shaped flowers. Handle like the gladiolus.

Rosea, Beautiful clear Rose Pink, very handsome and pretty

15c each, \$1.50 per dozen.

Candida, Pure white and a profuse bloomer.

10c each, \$1.00 per dozen, prepaid.

MONTBRETIAS

These are very pretty bright-colored summer-flowering bulbous plants, the flowers bloom out to the tips just like the gladiolus, they are gay and very attractive in the garden in late summer and fall and are invaluable for cutting, thin wiry graceful spikes 8 to 18 inches long, each bearing 18 to 30 showy star shaped flowers. Very artistic and beautiful. Handle like the gladiolus.

10 cents each; \$1.00 per dozen; \$7.50 per hundred, prepaid.

HYACINTHUS CANDICANS

The summer-flowering Hyacinth, a luxuriant-growing bulbous plant that looks like a Pandanus spreading 2 to 3 feet before the flower spike appears, this is 3 to 5 feet high bearing 20 to 30 waxy white bell shaped flowers. If planted in the center of a bed of gladiolus or other flowers, the effect is magnificent. Handle like the gladiolus.

15 cents each; \$1.50 per dozen; \$12.00 per hundred, prepaid.

TIGRIDIA

Tiger or Shell Flower. Extremely striking and handsome summer-flowering bulbs, growing about 1 to 2 feet high, producing large, gorgeous flowers in shades of yellow, orange and red, exquisitely spotted in the center, flowering very freely throughout the summer. Handle like the gladiolus.

15 cents each; \$1.50 per dozen; \$12.00 per hundred, prepaid.

ARTHUR C. KOERNER

Gladiolus Seed and Bulb Grower

FIVE OAKS FARM, NEWPORT, MINNESOTA

THE AMERICAN GLADIOLUS SOCIETY

If you are a gladiolus lover and do not belong to the American Gladiolus Society or to your own State Society you certainly are not getting all the enjoyment out of the flower that you could and should and would get if you were a member. It only costs \$2.00 a year and the Society publishes a gladiolus magazine that is a dandy and you get a copy every month as long as your dues are paid up.

Really, its the only way to know what's what and who's who and who the reliable growers are, for practically all of them advertise in the magazine and will be glad to send you their catalogs and lists.

We are offering \$1.00 worth of bulbs, your choice, from this catalog up to April first, if you will cut out this coupon, mail the application and \$2.00 to

ROSCOE HUFF, Secretary

American Gladiolus Society

Goshen, Indiana

This is for bonafide new members only. No renewals or transfers.

I hereby apply for membership in the American Gladiolus Society, and inclose \$2.00 as annual membership dues.

Mail this application and \$2.00 to

ROSCOE HUFF, Secretary

American Gladiolus Society

Goshen, Indiana

Name

Street

P. O. State.....

Amateur or Professional. Recommended by Arthur C. Koerner

Kindly mail the lower, good for \$1.00, coupon to us with the order for whatever bulbs you may want from this catalog. Do this at the same time you are sending in your membership.

ARTHUR C. KOERNER, Five Oaks Farm, Newport, Minn.

Dear Sir:

I have today sent in my application for membership in the American Gladiolus Society, with \$2.00 for annual membership dues and magazine.

I am a bonafide new member.

Name

Street

P. O. State.....

MINNESOTA GLADIOLUS SOCIETY

The above applies for new memberships in our State Society, which is affiliated with the A. G. S. In such case, send the application and \$2.00 to Secretary Wm. H. Boyle, 799 So. Smith Ave., St. Paul, and he will attend to the membership card and magazine for you.

OUR NEW DECKLE EDGE TYPE
